

Assyst Network connecting your pharmacy

Private networking

- Fast, economic and secure
- Connects all parties recognized by the pharmaceutical industry
- Compatible and user-friendly
- The information exchanged is encrypted through a secure channel
- Optimizes the exchange of all electronic data

What is Assyst Network?

- Assyst Network is a service integration network solution which offers secure connections through the Internet to all third parties recognized by the pharmaceutical industry.
- Utilizes the public Internet infrastructure and privatizes the connections to create a cost-efficient, secure network.
- Assyst Network is presently installed and functional in approximately 1,300 pharmacies in Canada.

What is Assyst Network? (continued)

Features

- Includes a feature for sending financial claims to all financial institutions.
- Includes a feature for sending health claims to all third-party payers.
- Used for sending TELUS Health Solutions daily pharmacy software updates.
- Used for providing support and monitoring for equipment and various TELUS Health Solutions services.
- Used by TELUS Health Solutions monitoring night crew to validate updates and backup copies at pharmacies.
- Supports secure connections between pharmacies.

What are the benefits?

- All information sent via Assyst Network's Virtual Private Network is encrypted in DES3/1PSEC mode.
- Facilitates the use of Anti-Virus for the pharmacy. Will be used to facilitate Off-Site Online Backup in the future.
- Assyst Network optimizes the exchange of all electronic data.
- Only the pharmacist and the selected connected third party can communicate and exchange via Assyst Network's secure, reliable and economical network.
- Pharmacists can even subscribe to Assyst Network from their home offices to access their pharmacies and oversee daily functions.
