

Corporate Profile

Leadership and expertise

Healthcare systems are facing numerous challenges forcing a basic redesign of traditional approaches to healthcare delivery. Providing quality and improved access to care for a growing number of patients experiencing chronic diseases while having to deal with shortages of clinicians and containment of costs is probably the most immediate difficulty we must meet head-on.

Rather than being reactive using expensive infrastructures and intrusive treatments, we must move to a proactive model of care which includes the active involvement of the patient and care givers. More than ever, healthcare providers must focus on providing well-integrated care that is intended to maximize quality of care through early detection and just in time interventions. Dataflows from the patients to professionals and between professionals about patients is necessary to achieve resourceful and sustainable healthcare.

Since 1999, New IT Healthcare has been working with healthcare providers and clinical experts in the development and deployment of advanced patient centric clinical applications. New IT Healthcare solutions support healthcare providers and agencies, as they strive to reach their financial goals, while improving the overall quality of care to their patients. Our solutions support service integration, continuity of care and patient empowerment, while helping to utilize resources efficiently and to attain higher performance goals.

New IT Healthcare's advanced software solutions target these new information-intense relationships. We propose a structured protocol-based application that is flexible and can be customized to fulfill complex case management needs. Our solutions provide a communication link between healthcare professionals promoting continuity of care and productive communication within the care team. Moreover, our technology platform can be used to create custom services for home telehealth, advanced disease management, medication compliance, health self-management and, wellness programs.

New IT Healthcare is totally involved as an organization to partner with leading health organizations to achieve excellence and total flexibility in the delivery of health care.

Advanced home telehealth

All New IT Healthcare solutions come bundled with a rich set of features enabling full support of the clinical relationship with the patients and communications between health professionals. The core of the solutions is a specialized patient record system containing a personalized and detailed structure of information linking all activities and pertinent data for any given use of the system. Through implementing a role based security access scheme, only designated professionals can access and update patient records. The solutions are precisely

Our Mission Statement:

“To directly contribute to the advancement of telehomecare by offering best-of-breed solutions that are flexible and adaptable to the needs of patients, healthcare professionals and their administrators.”

engineered to facilitate efficiency and ease of use. The solutions are all acting on clinical knowledge captured from our clients' best practices and formalized using our powerful IDPM Clinical Editor. New IT Healthcare solutions are clearly a breed apart for advanced management of clinical relationships.

Full operational support

Each customer need is unique. New IT Healthcare works closely with our customers to understand their requirements and provide them with solutions that meet their objectives. New IT Healthcare is committed to the maintenance of its solutions and to support each client with functional applications delivering optimal operations. Our team of professionals brings leadership and expertise to every project.

We offer the following services as needed:

- Cost/Benefit Analysis
- Project & Program Management
- Clinical Protocol Guidance
- Technology Integration
- Maintenance and Upgrades
- Implementation and Change Management
- Training
- 24/7 Support

“New IT Healthcare solutions are truly developed and perfected in close partnership with clinical professionals aiming to leverage technology to deliver more efficient and better care. As an organization, they are extremely responsive to clinical needs and the resulting solutions are innovative, efficient and easy to use. Our hospital was able to demonstrate that this collaborative approach can yield advanced and flexible tools to enable relationship-centered care.”

Dr. K. Pecko,
Director of Professional Services

“New IT Healthcare readily volunteered their time and expertise in the early phase of project building on the clinical protocol already available. They helped us develop our specific tool set to deal with patients with diabetes. Training and support prior and during the project was delivered by knowledgeable professionals aiming to really empower our personnel and ease change management.”

Cris De Luna, RN,
Telemonitoring Case Manager
