

IDPM Intelligent Distance Patient Monitoring

A best-of-breed home telehealth solution

IDPM is a secure and proven solution that enables healthcare organizations to establish and maintain powerful clinical relationships between healthcare professionals and patients at home. IDPM gathers and processes vital clinical information through a series of individualized virtual appointments. The immediate availability of patient data to the interdisciplinary care team allows caregivers to react in a timely manner to any changes in their patients' conditions.

IDPM is an innovative combination of features and functions designed to meet the needs of both patients and healthcare professionals. It includes a bank of protocols, developed by clinicians, that enables the creation of personalized follow-up plans. These plans are dynamic, adjusting to the patient's input in real-time by gathering supplemental information and/or providing educational and reinforcing messages.

IDPM was designed, both technologically and clinically, to foster patient empowerment. The system is designed to actively engage the patients in their follow-up plans:

- Ergonomic presentation
- Large color touch screen
- Branch logic questioning
- Buttons for health self-management
- Direct email link to the case manager
- Optional wireless keyboard

Tangible benefits and excellence of care

IDPM offers clinical, organizational, and financial value-added benefits by engaging and empowering patients in a new relationship with healthcare providers.

- Reduction of unplanned hospital admissions
- Reduction in usage of emergency services
- Shorter hospital stays
- Optimization of care resources
- Reduction of needed home visits
- Improved patient autonomy and empowerment
- Better outcomes
- Improved quality of life

IDPM offers advanced functionalities for clinical pertinence and better performance

By engaging the patient in a new partnership with healthcare providers, IDPM enables better coverage of the care cycle, extending it to the home for fully integrated healthcare delivery.

These results are achieved through unique features of IDPM such as:

- The IDPM Clinical Editor
- The IDPM Management Tools
- Follow-up plan templates
- Customize follow-up plan online
- Unlimited number of virtual appointments
- Unlimited number of Clinical Stations
- Medication compliance
- Seamlessly integrates medical devices
- Clinical record
- Statistics, charts and graphs
- Interoperability between client's software applications

New IT Healthcare is committed to the highest level of integrity. Our solution exceeds the HIPAA regulations to protect patient confidentiality. IDPM is a FDA Class 2 medical device.

IDPM THE GOLD STANDARD IN CARING FOR PATIENTS WITH CHRONIC DISEASES

New IT Healthcare understands that interoperability between software solutions is mandatory in today's healthcare setting. Our solution is compliant with HL7 standards and is RDB ready.

"IDPM allows for tight and secure monitoring of patients at home. Patients are cared for, supported, treated and maintained within a safety zone not otherwise available outside hospital settings. My patients using IDPM are at home with severe conditions and are able to maintain their health status with the help of strict compliance to monitoring protocols."

**Dr Michelle Lemay,
Hospital physician**

"As the COPD patient population increases far more rapidly than the number of health professionals capable of providing services to them, each professional is facing an annual increase of about 10% of their caseload. IDPM has become a necessary tool to increase our monitoring capacity and optimize the delivery of needed clinical interventions."

**D. St-Jules, Department Head,
Regional COPD Homecare Services**
