

Outstanding reference for a personalized “in pharmacy” client approach.

Assyst Drug Advisor from TELUS Health Solutions is a unique system facilitating the pharmacist's role as a professional consultant. It is linked to an exhaustive database featuring a storehouse of regularly updated pharmacological information.

The system is linked to a large number of online prescription tools and can be downloaded to PDAs for convenient use by health professionals.

Constantly updated, complete Drug Advisor

Multifunctional analysis program

- Detection of precautions-contraindications versus allergies, intolerances, disease-health conditions
- Detection of drug-drug, drug-food and drug-natural product interactions
- Partial and complete analysis of an existing or fictive patient profile
- Drug treatment alternatives

Rich bank of information

- Explicative texts in relation to precautions, contraindications and interactions detected
- Professional information sheets
- Patient advice sheets
- Pediatric dose adjustment tool
- Professional information database

May be entirely customized according to a pharmacist's needs and workflow

Complementary products belonging to the Assyst Rx portfolio of solutions

Assyst Rx Opinion

- Allows pharmacists to improve the quality of their intervention and to facilitate the claims process for professional fees related to pharmaceutical opinions and refusals
- Supplies text templates, written according to different variables (problems, causes and recommendations) that can be used and/or personalized according to the needs of the pharmacist and the patient

Assyst Rx Professional Inspection Module

- Provides documentation of pharmacists' interventions as it relates to the evaluation indicators for the execution of prescriptions in community pharmacies

Assyst Rx Bio Module

- Allows different clinical parameters and biochemical results to be allocated to the patient file

Assyst Rx Care Plan

- Designed to create pharmaceutical healthcare programs following the detection of problems related to pharmatherapy (PRP)
